

Database Setup or Form Translator yields "Cannot login to database specified" on Windows Vista, Windows 7, or Windows Server 2008

Last Modified on 12/16/2021 7:42 pm EST

Symptom

Invoking either Database Setup or Form Translator yields an error containing the phrase **Cannot login to database specified**.

Resolution

The workaround is to right-click Database Setup (or Form Translator) and select **Run as administrator**.

Applies To

OnGuard 2010 (6.4.500) or later

Windows Vista

Windows 7

Windows Server 2008

Windows Server 2008 R2
